SUMMARY

Hi, My name is Sulav and I began my journey to become a software developer in the late 2021's. The freedom of creating something on my own gave me sort of push to learn coding and since then I have worked and built multiple projects using HTML,CSS & JS all using popular JS framework i.e. REACT.

AREAS OF EXPERTISE

- HTML
- CSS / Bootstrap
- JavaScript
- React
- GitHub

EXPERIENCE

Built and deployed various projects and all of them can be viewed with GitHub source code and Live Demo

- **iMovie**

This project is built to search any movie with a inbuilt search functionality. User can add the movie into two different categories i.e. happy and sad. Also, they can filter them according to their needs. This project is fully dynamic and is built in React with the help of API's calls that has been accessed through an online API source.

- **Not To Do List**

This is also a dynamically created site using React, where a user can enter a task and hours add it to their task list. They can further send it to bad list with the hours. The site also shows the numbers of hours that could have been saved.

- **Prank Calculator**

This is also a React Project with full functional calculation ability and since it's a prank calculator it shows the right result only 50% of the time. And, when the prank is done, the screen flashes and changes its color to red, which indicates the user has been pranked.

Also, worked on different JS Projects which includes **color flipper, I-counter, blackjack Game** to name a few.

Education

Bachelor of Business Information System   **Feb 2017 – Jun 2019**
Asia Pacific International College, Sydney, Australia

Diploma of Software Development   **Jan 2016 – Jan 2017**
Canterbury Business College, Sydney, Australia

Certificate IV in Programming   **Jan 2015 - Jan 2016**
Canterbury Business College, Sydney, Australia

Personal Attributes

- Strong time management skills, developed through four years of successfully combining work and college studies
- Great team player, developed through experience in workplace as well as working on group projects in university
- Strong communications skills, developed through years of work in McDonald's dealing with customers in a fast-paced environment
